Project Profile: **Microsoft**

Microsoft: Project details

- Seven **Aero** tables at cafe height were designed for various areas throughout the space.
- Table ends were coordinate with the interior wall angles of the building as well as the floor plan to match the carpet geometry.
- Overcame manufacturing hurdles that included compound mitered joints.
- Corian table, due to it's narrow surface and cafe height, utilizes an internal support that is bolted to the floor for stability.

Microsoft: Corian made **Aero** Table

- A critical, yet perfect component to this project was to create an Aero table that was constructed solely from Corian, including its substructure.
